14 Vandeventer Avenue  
Suite 138  
Port Washington, NY 11050-3757

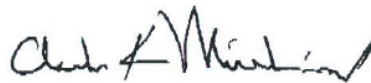

Dear Dr. Shen:

As you are aware, I have been using the mcg (aka 3dmp) for approximately one year now on a daily basis for the detection of significant coronary artery disease, as well as ruling it out. It is an invaluable tool which is on the cutting edge of technology, and should change how we practice medicine in the future. I can only imagine how the Internet was first started and the excitement that those that first used it felt. Look at it now. I see this technology as a major breakthrough that will revolutionize cardiology.

The most recent paper which will most assuredly be published adds substantially to the credence that this technology is very sensitive and specific.

I would be most happy to share my experiences in clinical practice with any other physician or agency that wishes to know more about this exciting new modality which will become a staple in the armamentarium that cardiologists have to detect and treat coronary artery disease.

Very truly yours,

Charles K. Miceli, M.D.
